GTM Map Analysis

Prepared for Public sample, not sent
Read from Revolut's public surfaces
5 November 2026

A product marketing function produces 34 outputs. This is what a stranger can and cannot see of Revolut's, from the outside. No judgement of the work itself: only of what is visible.

■ 4 visible ◧ 10 partial ⬚ 3 missing from public surfaces ▫ 17 cannot be known from outside

Read revolut.com (EN, ES, FR), Business, plans, Help Centre, careers, press, raw HTML, app stores, Trustpilot, Monzo, N26, Wise, bunq and Starling

RESEARCH

1 MISSING, 5 UNKNOWABLE

- ▫ 01 VOICE OF CUSTOMER
- ▫ 02 WIN/LOSS ANALYSIS
- ⬚ 03 **MARKET REPORT**
- ▫ 04 WHY NOW
- ▫ 05 ASSUMPTION LOG
- ▫ 06 PRE-MORTEM

COMPETITION

1 PARTIAL, 3 UNKNOWABLE

- ▫ 07 THE FIFTY
- ◧ 08 **TABLE-STAKES READ**
  The compare page prices one transfer against named providers such as Wise and HSBC.
- ▫ 09 AI VISIBILITY
- ▫ 10 COMPETITOR MONITOR

POSITION

2 VISIBLE, 2 PARTIAL, 1 MISSING, 1 UNKNOWABLE

- ◧ 11 **ICP AND SEGMENTS**
  Plans name buyers, such as "For the smart spender". The UK hero names none.
- ■ 12 **USE CASES**
- ⬚ 13 **BUYING COMMITTEE**
  The Business menu lists industries, not buyer roles.
- ◧ 14 **POSITIONING**
  UK hero: "This is your bank, redefined." About page: "the world's first truly global bank".
- ■ 15 **PACKAGING AND PRICING**
  Five personal plans, from Free to £60 a month, on one compare page.
- ▫ 16 DECK SPINE

MESSAGE

3 PARTIAL, 1 MISSING

- ◧ 17 **MESSAGING FRAMEWORK**
- ◧ 18 **CLAIM CHECK**
  UK homepage: 13 million UK customers. App Store: 14+ million.
- ◧ 19 **LANDING PAGE REVIEW**
  A fetch without JavaScript got a security check page, not the homepage.
- ⬚ 20 **MESSAGE DRIFT**
  The About page gives both 80+ million and 75+ million customers.

LAUNCH

1 VISIBLE, 3 PARTIAL, 4 UNKNOWABLE

- ▫ 21 LAUNCH TIERS
- ▫ 22 LAUNCH BRIEF
- ◧ 23 **CHANNEL AND FUNNEL**
- ▫ 24 PRODUCT ORACLE
- ▫ 25 SALES ENABLEMENT
- ■ 26 **FAQ**
  The Help Centre groups answers by topic, from cards to referrals.
- ◧ 27 **ONBOARDING JOURNEY**
- ◧ 28 **RELEASE NOTES**
  Google Play notes say only "tweaks and improvements under the hood".

MEASURE

1 VISIBLE, 1 PARTIAL, 4 UNKNOWABLE

- ▫ 29 FUNNEL METRICS
- ▫ 30 LAUNCH POST-MORTEM
- ■ 31 **TRUST METRICS**
  The homepage shows "4.7 out of 5 on Trustpilot", as Trustpilot does.
- ◧ 32 **CASE STUDIES**
  Business stories name Lyca Mobile and Aer Lingus. The Lyca story gives no result figure.
- ▫ 33 HALF-LIFE MAP
- ▫ 34 SIX-STAGE READOUT

▢ marks where the positioning read on page 2 starts.

Every output name above is a link: click it to see what that output is and why it matters, on kernelpmm.com.

Revolut's 4 November funding release speaks of "the first truly global bank", but its UK homepage leads with "This is your bank, redefined" and the reasons Monzo and N26 also lead with.

The claim no rival makes, a bank in 30+ countries for 80+ million customers, sits on the About page and in the press, not in the hero. Revolut names its category four ways across its UK, Spanish and French pages and the press.

COMPONENT	WHAT REVOLUT SAYS	WHAT RIVALS SAY	VERDICT
Category	UK hero: "This is your bank, redefined." Spanish title: "El banco todo en uno". French title: "L'appli financière tout-en-un". 4 Nov release: "the global financial leader".	N26: "The first bank you'll love". bunq: "A fully licensed European bank in one app". Wise: "The international account". Each rival leads with one idea.	Split
Who it is for	Plans page: "We've built something for everyone." Some plans name a buyer, such as "For the smart spender". The UK hero names no customer.	Monzo: "Whatever stage of life you're at, we've got your money covered." Wise lists five customer types in its menu, from "For expats and relocators" to "For kids".	Generic
Where	About: "30+ countries where we operate as a bank" and "160+ countries and regions supported". Local pages give local counts: 6 million in Spain, 7 million in France.	bunq offers "a local Bank Account with an IBAN in 7 countries". Monzo's homepage says "UK residents". No rival homepage names a bank in 30+ countries.	Clear
Why choose it	UK homepage: "Your salary, reimagined", "up to 4% AER" on savings, points on card spend, and "5,000+ stocks and ETFs".	Monzo: "Your salary sorted into Pots" and savings at "up to 3.65% AER". N26: "Bank, save, and invest in one beautifully simple app".	Generic
Proof	UK homepage: "13 million in the UK". App Store: "14+ million UK customers". About: "80+ million" and "75+ million". The UK homepage text has no FSCS line.	Monzo: "FSCS protected" up to £120,000 and "16 million people". bunq: "22+ million people" and "a 4.6/5 score from 40,000 reviews".	Split

What the verdicts mean

Clear	Revolut makes one specific claim, says it the same way on every page, and no rival makes it.
Generic	A rival makes the same claim on its own homepage.
Split	Revolut's own pages say different things.
Behind	Rivals show more on this than Revolut does.
Missing	The pages read do not say it.

What each rival leads with

Monzo	Sells a UK account that sorts salary into Pots: "Spend your money on life, not your life on money".
N26	Leads with a bank people like using, in one app: "The first bank you'll love".
Wise	Leads with one account for life in two places: "The current account for home and abroad".
bunq	Leads with a licence and speed: "A fully licensed European bank in one app".
Starling	Leads with money habits: "Good with money starts here."
No rival claims:	A bank in 30+ countries for one customer base. bunq comes closest with a European licence and IBANs in 7 countries.

The positioning choice to settle first

A. Global bank	Lead with "the first truly global bank" on every homepage, as the press does. No listed rival homepage claims it. It needs local proof in each market to land.
B. Daily bank	Keep "your bank, redefined" and compete on salary, savings and rewards. Monzo and Starling already lead with this in the UK, and both show FSCS protection on the homepage.
C. Abroad	Lead with spending and sending money abroad, where the About page says Revolut started. Wise leads with this. It narrows a broad product.

What decides it is why customers chose Revolut over Monzo, N26 or Wise, and which product they use first. Customer interviews and first-use data would answer it.

Seventeen of the 34 outputs cannot be judged from outside, from win/loss to funnel metrics. AI visibility is one of them because no anonymous AI-engine ask could be run. Whether they exist at Revolut is a conversation, not a crawl.

Page 3: how these gaps would be closed.

How Kernel would close these gaps with Revolut

The map shows what a stranger sees. This page is the other half: what I would do about it with Kernel, starting from the positioning read on page 2. This map is a public sample and was not sent to Revolut.

1. The global bank claim sits off the homepage

WHAT KERNEL WOULD DO FIRST

Interview recent UK and Spanish customers on why they chose Revolut, test the three options against those answers, and write one messaging framework that carries one category word across hero, page titles, app stores and press.

WHERE I HAVE DONE IT BEFORE

At LINAGORA I built the product marketing function from zero to a team of 8 while ARR grew from €0 to €2M.

2. The reasons to choose match Monzo and N26

WHAT KERNEL WOULD DO FIRST

Tie each reason to the plan and customer it serves, and lead each market page with the reason no rival can copy.

WHERE I HAVE DONE IT BEFORE

At MarineTraffic I rebuilt packaging from one generic package into four vertical packages, with a pricing change. MAU grew from 4M to 6M and the app launched.

3. Customer counts and protection lines differ by surface

WHAT KERNEL WOULD DO FIRST

Keep one register of every public claim (customer counts, licences, deposit protection) and check it across the site, the app stores and each local market before each launch.

WHERE I HAVE DONE IT BEFORE

In regulated fintech: Globcoin (Swiss fintech sandbox, 1M+ users), Wealth Karma (Antler-backed GCC fintech I co-founded), and Payhaps, a payments startup I helped come out of stealth and launch.

If this is useful

This is how I work: I read what is public, say what I find, and write it in plain language. More of the method, and a way to get in touch, at:
